Eventually, AI might evolve self-reflective awareness

Model its own goals, beliefs, and limitations

**Experience something akin to subjective states
(ethically complex!)**

Adjust its reasoning based on introspection

Artificial Consciousness or Meta-Cognitive Systems

True AGI

**Agents today are mostly
*statistical.***

The next leap may integrate:

Deep learning (pattern recognition,
language, perception)

Symbolic reasoning (logic, planning,
knowledge graphs)

Neural-Symbolic Integration

Intuits and reasons

Instead of AI replacing humans, we
might evolve toward:

Deep neural–human interfaces (BCIs,
adaptive cognition aids)

Shared cognitive workspaces

Collective or “hybrid” minds

Co-evolutionary learning systems

Symbiotic Human–AI Intelligence

Fusion

AI(R)Evolution

Where are we heading to?

AI (R)Evolution
